Summary

Full Stack Web Developer with experience in teaching and front end development. Recently earned a Certificate in Full Stack Development from the UCLA Extension School's Full-Stack Boot Camp. Technology skills include JavaScript, CSS, HTML, Bootstrap, and React with Redux. Passionate about overcoming programming challenges and enhancing the synergy in group projects. My technical skills combined with my background in media make me a strong candidate for being part of a team of multi-media web developers. Earlier this year, I graduated from Udacity.com's Front End Web Developer course. One of my best recent achievements in that course was a matching game that used a timer and animated effects. On my own I made a PWA that used a Google Firebase database. My most recent apps include a weather dashboard using an API call, a day planner using local storage memory, and a class project that used to API calls to get a horoscope for a Pokemon that a user searches for.

Education

UCLA Full Stack Boot Camp

Full Stack Web Developer certificate

UCLA Extension School
